

# Training Program on how to evacuate a vehicle that has been involved in an accident

**Learn how to organise the evacuation of passengers after a road accident in optimum safety conditions, regardless of the bus' position.**

## Goals

Learn how to get out of a public transport vehicle that has been involved in a road accident, in optimum safety conditions, until the emergency services arrive.

## Evacuation theoretical content

- Accident statistics for public transport vehicles
- Characteristics of these accidents
- Specific risks
- Difficulties linked to evacuating a vehicle on its side

## Evacuation practical content

Simulations according to the following cases:

- Vehicle on its wheels
- Vehicle on its side
- Vehicle on fire
- Presence of casualties and people with reduced mobility

## Ultra-realistic simulations due to the use of:

- Latest generation manikins (25 - 50 - 70

Ultra-realistic simulations due to the use of:

- Latest generation manikins (25 - 50 - 70 kg)
- A smoke generator
- An accident visual and sound simulation device (STRESSIT system)

## Nombre de participants

12 per group

## Durée

1 day per group

## Lieu

Your premises
